

1100-S / 2100-SRT COMPARISON

The only major difference between the 1100-S and 2100-SRT is the film carriage. The 2100 comes standard with the Super Rapid Thread II powered pre-stretch carriage that pre-stretches the film using approximately half the amount of film per load compared to the 1100-S. The end result is a huge amount of savings in film cost plus providing a better package. The Super Rapid Thread II powered pre-stretch film carriage offers more benefits for the little difference in price between the 1100 and 2100.

That does not make the 1100-S less effective for certain applications. The 1100-S is equipped with a caliper brake web tensioning system that is better suited for:

- Pre-stretched film
- Netting material
- Heavy loads

It is a simple design with easy adjusting of the film tensioning yet rugged enough to function properly in extreme environments.

COMMON SPECIFICATIONS

<i>Feature</i>	<i>LP-1100-S LP-2100-SRT</i>
<i>Turntable - Max Weight</i>	4000#
<i>Turntable Size (LP)</i>	57" diameter
<i>Turntable Support (LP)</i>	36 roller bearings
<i>Maximum Load Size</i>	50" x 50" x 80"
<i>Maximum Diagonal</i>	71"
<i>Tower Design</i>	Steel Fabrications
<i>Machine Footprint (LP)</i>	60" W x 96" L x 91" H

COMMON FEATURES

All AC variable speed motors
HMI operator interface with diagnostics
Heavy duty surround deck on low profile turntable
Lifting tubes front & rear for easy portability
Warranty - 5 years on fabrications & 3 years on buyout components

- ❖ Affordable and simple machines with more standard features than any other pallet wrapper in the same price range
- ❖ A quality machine built with quality components and supported by a local qualified distributor
