

**Operator safety is a PRIORITY for Cousins Packaging.**  
Our machine designs incorporate more safety features than any other pallet wrapper.

**PLUS** the A-Arm model will.....

- SAFELY operate the machine from the forklift.
- Eliminate the concern for possible injuries with the operator constantly getting on and off the vehicle.
- No more bending over to attach and cut the film even when using a manual pallet jack.

Cousins engineering has developed an advanced cut and hold device. The A-Arm provides significant productivity gains and safety benefits:

- eliminates the clamp and the need for the operator having to be involved in attaching the film to the clamp.
- eliminates any hot, heated devices (wires or elements) that are needed to cut the film.
- ALL ELECTRIC – no costly pneumatic lines or noisy air compressors required.

**This technology is only available from Cousins Packaging**
